Peca[®]

PeCa® Implants

The PECA® Implant System, in titanium alloy, is designed for percutaneous bunion correction and comes in Ø3 and Ø4mm options. The system provides a complete and versatile portfolio of beveled fully threaded implants intended for the fixation of osteotomy and arthrodesis of the foot.

The Exact2-T Recess provides precision in fluoro percutaneous implant positioning. It allows for removal with standardized instrumentation.

The PECA® set combines specific instrumentation for PECA® implant and percutaneous instrumentation including periosteal elevator rasp, reduction device, beaver blade holder for percutaneous surgery.

Pecaplasty®
Wires First™

Pecaplasty® Wires First™ Targeting Guide

The Pecaplasty® Wires First system allows for simple, precise, and reproducible correction of Hallux Valgus in percutaneous surgery. With its easy positioning on the foot, the Pecaplasty® targeting guide allows for an accurate K-wire placement before osteotomy, and then a controlled translation of the metatarsal head.

PECA® implants are used to fix and stabilize the correction.

Tarsoplasty®

Tarsoplasty® Guide

The Tarsoplasty® system allows guided and controlled Lapidus for simple, precise and reproducible correction of Hallux valgus in percutaneous surgery.

Associated with PECA® and PECA® Compressive implants, the Tarsoplasty® system ensures triplanar correction and stable construction to restore desired alignment of the first metatarsal.

Peca[®]

Compressive

PECA® Compressive Implants

PECA® Compressive Ø4 Implants in titanium alloy are intended for the fixation of osteotomy and arthrodesis of the fore- and midfoot. The implant is equipped with a beveled head, and partially threaded cutting flutes allow compression by seating flush with the near cortex, preserving soft tissue structures.

These implants can be implanted alone or in association with Airlock® plate.

The PECA® set combines specific instrumentation for PECA® implant and percutaneous instrumentation including periosteal elevator rasp, reduction device, beaver blade holder for percutaneous surgery.

Nexis[®]
MIS

Nexis® MIS

Ø2.7mm Nexis® MIS is a titanium alloy cannulated compressive screw featuring an elliptic beveled head. Its self-tapping, self-drilling, and reverse cutting flutes properties, combined with its specific and universal Exact-2 T8 recess, allow for easy insertion and for removal with a standard T8 screwdriver if necessary.

The beveled head is designed to maximize cortical anchorage and preserve soft tissue.

The Nexis® MIS screw is used in combination with a Ø1.2K-Wire.

Nexis® Forefoot Instruments

A modular concept allowing customization of the ancillary according to the surgeon's preferences or the indication. There are two versions available:

- **ForefootCOMPLETE:** possibility to accommodate Nexis® screws, Arcad® staples and Lync® intramedullary implant modules in the same set.
- **ForefootEXACT:** possibility to interchange Nexis® modules, Arcad® staples and Lync® intramedullary implant for a reduced size in half set.

Centrolock[®]

Centrolock® Guided Transverse Osteotomy System

Centrolock® guided transverse osteotomy system is for minimally invasive hallux valgus correction.

The hybrid design combines a cannulated intramedullary stem with plate fixation on the metatarsal head. Powerful three plane corrections once achieved only by Lapidus, can now be performed through a distal minimally invasive guided approach.

Airlock[®]

Foot Plating System

Airlock® Foot Plating System

The Airlock® Foot Plating System consists of a range of osteosynthesis plates for the forefoot, midfoot, and rearfoot made of titanium alloy. It combines a low profile plate design dedicated to each indication, a compression hole, and a monoaxial and polyaxial screw system to ensure a stable and rigid fixation

Presslock® technology provides a locking compression hole that ensures a stable construct. It is available on the Fusion, Lapidus and Plantar Lapidus plates.

(1) K-wire supplied separately. Medetechnik® K-wire (33-T10-R-22-200) or Novastep® K-wire (CKW01011) available depending on your market.

(2) Saw blade supplied separately.

Lync[®]

Lync® Hammertoe Correction

The Lync® intramedullary implant is intended for arthrodesis of the phalanges in the proximal and distal interphalangeal joint of the foot. It is particularly recommended for the treatment of hammertoes. Its anti rotation design reduce the risks of rotation. Its expansion capacity and the notched grooves allow effective intraoperative anchorage to prevent migration and pullout.

Arcad[®]

Arcad® Osteosynthesis Compressive Staples

Made of Nitinol, osteosynthesis compressive staples are indicated for the correction of bone deformities (Hallux valgus, Lesser ray deformities, Hammertoe deformity, Coalitions, Rheumatoid foot deformity, Cavovarus foot, Flatfoot), and treatment of foot joint stiffness (Hallux rigidus, Foot arthritis).

Designed to facilitate fast and easy fixation, memory metal staples provide dynamic compression at the osteotomy and athrodesis site.

Other Products

K-Wires

Orthopedic k-wires allow the fixation of the correction after arthrodesis or osteotomy as well as a precise positioning of the cannulated screws and implants. They can also be used in combination with the cannulated instruments necessary for the surgical procedure (countersink, drill, screwdriver, etc.).

Implant Dispenser

The ergonomic implant dispenser is designed to maximize the total number of implants available with minimum usage of space in the operating room. The implant dispenser is customizable with multiple combinations for each product range.

Available with 2 or 4 trays, in standard or high version, the implant dispenser allows the storage of 44 implants in size S boxes or 22 implants in size M boxes.

Single Use Instrumentation Kit

Single Use instrumentation is available for immediate use to allow you to operate at any time in the best conditions. It can also be a back-up solution in the case of faulty or non-sterile equipment.
